Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-58 (canceled)

- 59. (currently amended): In a reminder device for use with a cylindrical container, the device comprising:
- a. a deformable sheet movable member, said sheet including a first portion, and said sheet including a second portion linking to said first portion to form a loop;
- said movable member defining a first structural area for supportive engagement and said movable member defining a second structural area for selective anti-displacement engagement;
- said movable member held on the side of the container and said movable member
 engageably moveable within a plane to each of a plurality of selectable reminding positions;
- d. a deformable support sheet member, said support member defining a first structural area to receive supportive engagement therewith said first area of said movable member, and said support member defining a second structural area to receive selective anti-displacement engagement therewith said second area of said movable member at one of said selectable positions;
- e. said selective anti-displacement engagement of said second area of said movable member with said second area of said support member at one of said selectable positions disallowing said movable member to move along a path within said plane, said path representing the shortest distance within said plane, between said one selected position and a second one of said selectable positions;
- f. and the device attachable to the container such that the entire device preattached to the container can remain attached to the container during the engaged movement of the moveable member from the one selected position to the second one of the selectable positions.

- 60. (previously presented): A device as in claim 59 wherein the format of said movable member is one chosen from a list including, included in a first portion of a deformable common sheet which includes said support member in a second portion, included in a sheet and is adapted for subsequent assembly, assembled with said support member, assembled with the container.
- 61. (previously presented): A device as in claim 59 wherein said support member is a pharmacy label.
- 62. (previously presented): A device as in claim 59 wherein one of said anti-displacement engagement areas includes an element which is one chosen from a list which includes, a détente, an anti-rotation détente, an aperture, a tooth, a label sheet, a deformable member, an adherable member, a notch, an adhesive member, a tab, an opening, a bump, a recess, a protrusion, a slit, a ridge, a deformation.
- 63. (previously presented): A device as in claim 59 and further including co-operating indicia.
- 64. (previously presented): A device as in claim 63 wherein said co-operating indicia include an arrangement of times co-operating with a pointer adapted to point to any one of said times.
- 65. (previously presented): A device as in claim 59 and further including an adhesive.
- 66. (previously presented): A device as in claim 59 and further including a container.
- 67. (canceled):
- 68. (canceled):
- 69. (previously presented): A device as in claim 59 wherein said movement performed by said movable member to select one of said positions is one of a type chosen from a list which includes, sliding movement, rotational movement.
- 70. (currently amended): A device as in claim 59 where said preassembled device remains preassembled during said engaged movement of said moveable member from said one selected position to said second one of said selectable positions wherein one of said members includes a material chosen from a list which includes, sheet material, transparent material, paper material, cardboard material, plastic material.

- 71. (previously presented): A device as in claim 59 and further including a plurality of non-identical selectable values viewable at a viewing surface of said support member, said unselected plurality immediately prior to selection, exhibiting a characteristic which is one chosen from a list including, simultaneously uncovered, simultaneously viewable, arranged in an array, showing at least one of said values designated for an event.
- 72. (currently amended): A method comprising:
- a. providing a deformable sheet movable member, the movable member defining a first structural area for supportive engagement and the movable member defining a second structural area for selective anti-displacement engagement, the sheet including a first portion, and the sheet including a second portion for linking to the first portion to form a loop;
- the movable member retainable on the side of a cylindrical container and the movable member engageably moveable within a plane to each of a plurality of selectable reminding positions;
- c. providing a deformable support sheet member, the support member defining a first structural area to receive supportive engagement therewith the first area of the movable member, and the support member defining a second structural area to receive selective antidisplacement engagement therewith the second area of the movable member at one of the selectable positions;
- d. such that the selective anti-displacement engagement of the second area of the movable member with the second area of the support member at one of the selectable positions disallows the movable member to move along a path within the plane, the path representing the shortest distance within the plane, between the one selected reminding position and a second one of the selectable reminding positions;
- e. and the device assemblable such that the preassembled entire device can remain assembled during the engaged movement of the moveable member from the one selected position to the second one of the selectable positions.
- 73. (previously presented): A method as in claim 72 wherein the movable member is included in a first portion and the support member is included in a second portion of a common deformable sheet.

- 74. (previously presented): A method as in claim 72 wherein the support member is a pharmacy label.
- 75. (previously presented): A method as in claim 72 wherein one of the anti-displacement engagement areas includes an element which is one chosen from a list which includes, a détente, an anti-rotation détente, an aperture, a tooth, a label sheet, a deformable member, an adherable member, a notch, an adhesive member, a tab, an opening, a bump, a recess, a protrusion, a slit, a ridge, a deformation.
- 76. (previously presented): A method as in claim 72 wherein the type of movement performed by the movable member to select one of the reminding positions is one chosen from a list which includes, sliding movement, rotational movement.
- 77. (previously presented): A method as in claim 72 and further including co-operating indicia including an arrangement of values co-operating with a pointer adapted to point to any one of said values.
- 78. (canceled):
- 79. (previously presented): A method as in claim 72 and further providing the cylindrical container.
- 80. (previously presented): A method as in claim 72 and further including an adhesive.
- 81. (currently amended): A method as in claim 72 where said preassembled device remains preassembled during the engaged movement of the moveable member from the one selected reminding position to the second one of the selectable reminding positions wherein one of the members includes a material chosen from a list which includes, sheet material, transparent material, paper material, cardboard material, plastic material.
- 82. (previously presented): A method as in claim 72 and further including a plurality of non-identical selectable values viewable at a viewing surface of said support member, said unselected plurality immediately prior to selection, exhibiting a characteristic which is one chosen from a list including, simultaneously uncovered, simultaneously viewable, arranged in an array, showing at least one of said values designated for an event.
- 83. (canceled):

- 84. (currently amended): A reminder device which can be attached to the side of a cylindrical container, comprising:
- a deformable sheet movable member, the sheet including a first portion, and the sheet including a second portion for linking to the first portion to form a loop;
- the movable member defining a first structural area for supportive engagement and the movable member defining a second structural area for selective anti-displacement engagement;
- e. such that, when the movable member is formed into a loop by linking the second portion to the first portion and the loop is held on the side of the cylindrical container, the movable member is engageably moveable within a plane to each of a plurality of selectable reminding positions;
- d. a deformable support sheet member, the support member defining a first structural area to receive supportive engagement therewith the first area of the movable member, and the support member defining a second structural area to receive selective anti-displacement engagement therewith the second area of the movable member at one of the selectable reminding positions;
- e. whereby, the selective anti-displacement engagement of the second area of the movable member with the second area of the support member at one of the selectable reminding positions disallows the movable member to move along a path within the plane, the path representing the shortest distance within the plane, between the one selected reminding position and a second one of the selectable reminding positions;
- f. and the device assemblable such that the preassembled entire device can remain assembled during the engaged movement of the moveable member from the one selected position to the second one of the selectable positions.
- 85. (previously presented): A device as in claim 84 and further including a container.
- 86. (previously presented): A device as in claim 84 and further including an adhesive.
- 87. (currently amended): A device as in claim 84 where said preassembled device remains preassembled during the engaged movement of the moveable member from the one selected reminding position to the second one of the selectable reminding positions wherein one of the members includes a material chosen from a list which includes, sheet material, transparent material, paper material, cardboard material, plastic material.
